

ABSTRACT OF THE DISCLOSURE

A cylindrical base portion of a towel rod holder is mounted on a mounting surface and
5 extends outwardly therefrom. A cylindrical extension portion engages the base portion and
extends outwardly therefrom. A disc shaped cap portion engages the extension portion
providing cap holes therein. A first fastener engages the cap holes and extends through the
extension portion and the base portion into the mounting surface, thereby securing the
apparatus to the mounting surface. The cap portion further provides a receiver adapted for
10 engaging a second fastener so that a towel rod holder may be mounted on the apparatus
using the second fastener for placement of a towel rod further from the mounting surface
than a prior mounted towel rod.
